CANON DIGITAL TRINITY

Only Canon has the unique advantage of designing all three elements of the camera, i.e. the lens, image sensor and imaging processor. This provides higher-quality images in diverse shooting conditions. We call this the 'Canon Digital Trinity.'

CINEMATIC MOVIE RECORDING

Beyond future-proofing your videos, true-to-life realism with 8K*1 no-crop video recording, which provides video editors the ultimate freedom to pan across footages or zoom in on any subject without any loss of quality when delivered in FHD or even 4K! With all the additional pixels, it is also possible to crop out anything distracting, reframe the composition or perform post-stabilisation. 8K resolution is 4 times that of 4K*1 and 16 times of FHD*1.

DUAL PIXEL INTELLIGENT AF*

Next-gen AF system which captures moments that were missed before. By prioritizing actions and detecting obstacles and other unpredictable scenarios, Dual Pixel Intelligent AF offers dramatic improvements in AF tracking performance based on accelerated capture and deep learning, utilizing high speed calculations and processing of large amounts of data by DIGIC Accelerator and DIGIC X Processor on board.

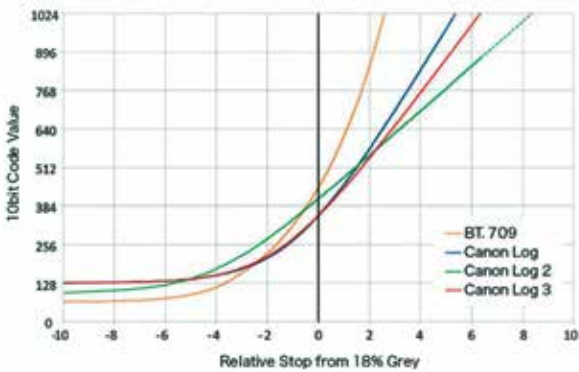

IN-BODY IMAGE STABILISER*

The 5-axis camera-shake blur correction function works in tandem with the lens's image stabiliser, effectively reducing image blur equivalent to up to 8.5 stops in-center and 7.5 stops at the periphery- resulting in reduced shakiness and improved usability of footages even when shooting from challenging angles or when shooting handheld while walking. It also dramatically expands the possibilities of capturing sharp handheld images and videos in low-light conditions.

*Availability & performance varies with selected cameras and lenses. For more information, check the product section of the brochure. All images and effects are simulated. Actual image may vary.

Eye Control AF*

Experience the power of focusing by sight, which redefines the limits of focusing speed and accuracy. Direct the AF point with your eye by looking at the desired subject through the viewfinder to achieve focus and recommended in situations with multiple subjects as it provides a high degree of flexibility in switching focus quickly from one subject to another.

Canon Log 2*/Canon Log 3*

Canon Log 2 produces output that has extremely low contrast with characteristics close to film and has a feature to maintain uniform gradation with respect to the aperture over a wide range from dark areas to highlights. While it offers a great degree of flexibility in post-processing, grading work is necessary. Canon Log 3 is designed based on the original Canon Log but with extended highlights, making post-processing relatively easier in comparison.

In-Camera Upscaling*

In-camera upscaling uses deep learning to generate images from JPEG/HEIF to 4x of native resolution after shooting by increasing the number of pixels by 2x vertically and horizontally. High-resolution images can be generated even after cropping. The algorithm is fine-tuned so that it creates images that do not deviate from the original image while maintaining apparent resolution.

THE REVOLUTIONARY RF MOUNT SYSTEM*

The new and revolutionary RF Mount System is the latest technological advancement in the EOS universe. Featuring a large 54mm diameter and a high bandwidth 12-pin communication system. The large diameter mount coupled with a 20mm short back focus higher quality, wider aperture optics in a relatively compact size. This brings benefits of improved speed and performance that allow more image corrections (DLO or Digital Lens Optimiser) and improved performance of image stabilisation.

*Availability & performance varies with selected cameras and lenses. For more information, check the product section of the brochure. All images and effects are simulated. Actual image may vary.

- 32.5 Megapixel Full frame Sensor
- 7K 30p Open Gate + 7K 60p Internal RAW Recording
- Canon 709, Log 2 & 3
